

school cancer robots

School is one of the first things to turn upside down when cancer crashes into your world. Robots can help you stay connected to school and keep in touch with friends during treatment.

If you are aged 12-18 and have received a cancer diagnosis, CanTeen can help.

A cancer diagnosis can considerably disrupt a young person's education. They may experience difficulties keeping up with their grades, maintaining friendships and feel anxious about returning to school after treatment.

Our robots allow young people to remotely connect with school when they are unable to attend and support their education and connection to their peers during treatment.

- + Use a robot free of charge to help connect to school
- + Receive full technical support from CanTeen
- + Our *When Cancer Comes Along* school education program helps friends understand the impact of cancer
